

SnapSafe AI — 90-Second Competition Demo Script

Snapdragon AI Lab Build & Present Challenge 2026

[00:00 – 00:15] The Hook & The Problem

“Every single day, millions of students, engineers, and professionals share their screens during remote interviews, online classes, and client webinars. But here is the silent danger: we share our screens without realizing how much sensitive information is visible in open tabs, notes, and terminals.”

[00:15 – 00:30] Launching the Scenario

“Take a look at this realistic university student portal. In plain view, we have a student’s full name, email, personal phone number, student ID, a confidential scholarship remark, and a live private API key. If I share this right now over Zoom or Teams, that information is permanently exposed.”

[00:30 – 00:50] The Local AI Scan

“Watch what happens when I click SCAN SCREEN. In under two seconds, SnapSafe AI captures the display and analyzes the frame locally. It highlights every sensitive item with color-coded bounding boxes: Critical API keys and passwords in red, student IDs and phone numbers in orange, and email in yellow. Our on-device Privacy Coach explains the exact risk and recommends instant masking.”

[00:50 – 01:10] The Transformation (Before / After)

“Now look at Safe Share. With one click on PROTECT & SHARE, SnapSafe AI automatically redacts the sensitive bounding boxes using Gaussian blur or solid blackout. Here is the interactive before-and-after slider: our Privacy Risk exposure plunges from 87 all the way down to 4. The screen is safe and ready to share.”

[01:10 – 01:25] The Snapdragon Advantage (Zero-Cloud)

“And here is our core technical differentiator: Data Sent to Cloud: ZERO BYTES. SnapSafe AI is architected specifically for Snapdragon AI PCs—offloading continuous computer vision to the 45 TOPS Qualcomm Hexagon NPU at under 5 watts of power. No fan noise, no battery drain, and zero data leaves your PC.”

[01:25 – 01:30] Closing Punchline

“SnapSafe AI: See it. Detect it. Protect it. Before you share it. SnapSafe AI turns the AI PC into a privacy firewall. Thank you!”
